

# Pediatric Influence of Cooling duration on Efficacy in Cardiac Arrest Patients

Investigator Meeting  
Wednesday, May 4

P-ICECAP

NIH SIREN  
Emergency  
Trials  
Network

# Welcome

Dr. Frank Moler

# Agenda

Time	Topic	Speaker
6:00 PM	<a href="#">Welcome and Review of Agenda</a>	Dr. Frank Moler, MD
6:10 PM	<a href="#">Introductions</a>	Dr. Alexis Topjian, MD
6:30 PM	<a href="#">Brief History and Overview</a>	Dr. William Meurer, MD
7:15 PM	<a href="#">SIREN Overview</a>	Drs. Robert Silbergleit, MD & Sharon Yeatts, PhD
7:25 PM	Q & A	All faculty
8:10 PM	Adjourn Day 1	

# Introductions

Dr. Alexis Topjian

# History and Overview

Dr. William Meurer

# Questions

Why be adaptive?

Why study hypothermia?

How will trial work?

P-ICECAP

NHLBI UG3HL159134, U24HL159132

NINDS U24NS100659, U24NS100655

6

# P-ICECAP

A randomized, response-adaptive, duration-finding, comparative effectiveness clinical trial with blinded outcome assessment.

P-ICECAP

NHLBI UG3HL159134, U24HL159132

NINDS U24NS100659, U24NS100655

7

Part 1

# INTRODUCTION TO ADAPTIVE CLINICAL TRIALS

P-ICECAP

NHLBI UG3HL159134, U24HL159132

NINDS U24NS100659, U24NS100655

8

# Why Clinical Trials Stink

# Why Clinical Trials Stink

ANALOGY\*: Clinical Trial = Diagnostic Test

	Clinical Trial	Diagnostic Test
Looking For	Effective Treatment	Disease
1 – Type II Error (Beta)	“Power”	Sensitivity OR True Positive Rate
Type I Error (Alpha)	Significance Level	1- Specificity OR FALSE Positive Rate

\*Note: My analogy does not stink

# Clinical Trials are Models with Tons of ~~Guesses~~ Assumptions

- Dose from animal models is close
- No heterogeneity of effect
- Subgroups respond equally
- Some subgroups excluded
- Effect size to create “reasonable” sample size
- “Noise” in outcomes can be understood and overcome
- Duration of treatment practical
- **LESSON: Make many compromises to reduce number of parameters to make model “solvable”**

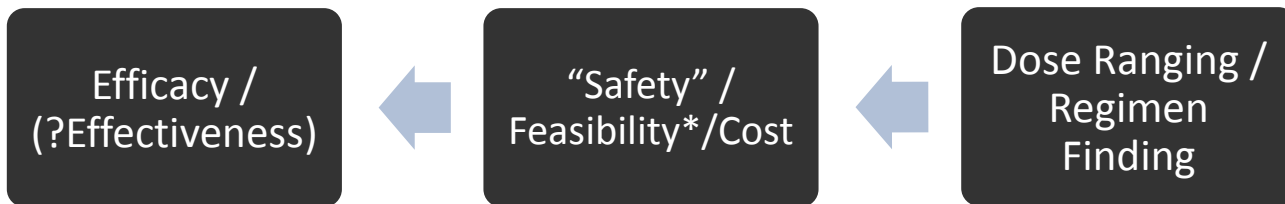

# Therapeutic Response Surface

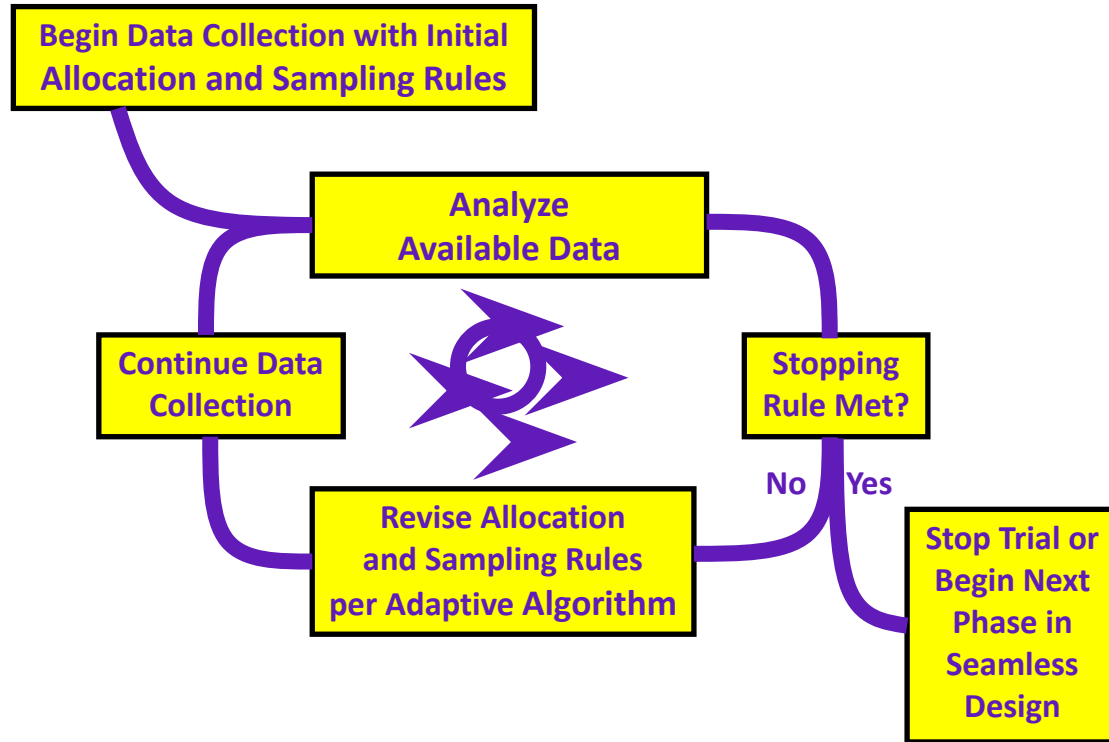

# Preclinical Experiments

# Clinical Trials

# The Adaptive Process

# The Adaptive Process

JAMA  
2006;296:1955-1957.

P-ICECAP

NHLBI UG3HL159134, U24HL159132

NINDS U24NS100659, U24NS100655

# GOAL:

Design a trial that leaves no (or few) regrets.

The clinical community and funders will know what to do next.

The “pre-mortem.”

# CAVEAT:

An adaptive or flexible design doesn't always make sense.

(We do not usually know as much before starting the trial as we will after we have data for most situations...)

# ADAPT-IT 2010-2012

- FDA / NIH Common Fund cooperative award that to develop adaptive clinical trial designs for confirmatory, large scale trials
- Process
  - Stakeholder Meeting to present the clinical problem
  - Preliminary design - Simulations and iterations
  - Stakeholder Meeting to review “final” design proposal
  - More simulations and validation
  - Development of protocol (IDE / clinical trial protocol)

# Thematic Adaptive Motivation for (adult) ICECAP

- Fixed design
- 1800 patients
- 12, 24, 48
- Anticipated regrets

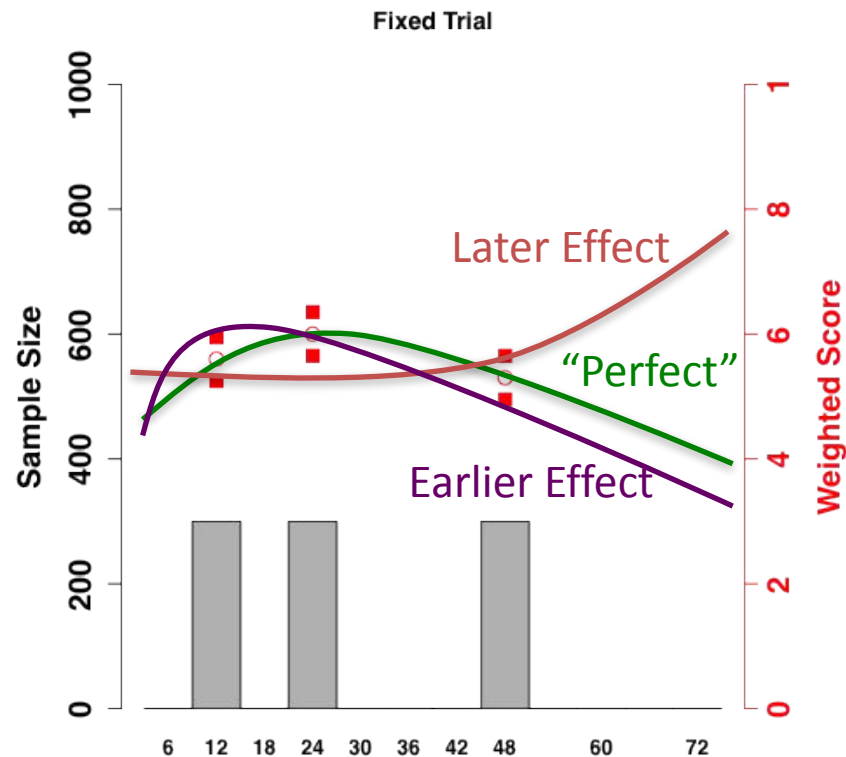

# Example Outcome of Fixed

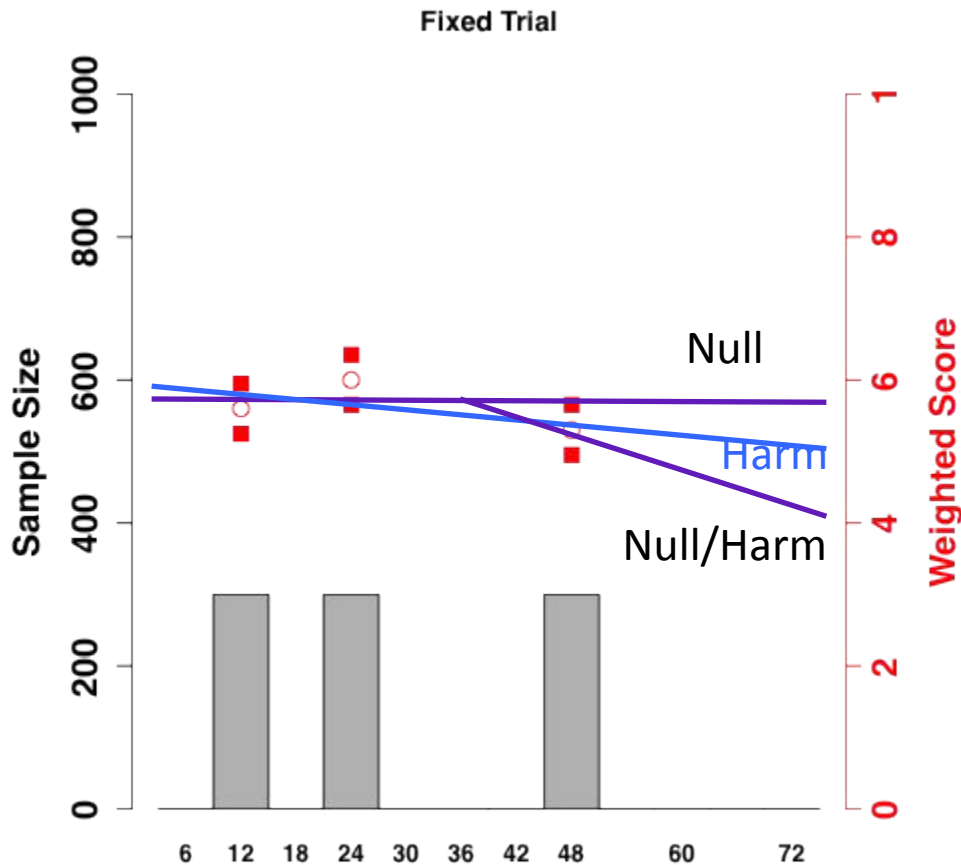

- Idealized Outcome?
- Answer All your questions?
- Do anything differently?

# Example Outcome of Fixed (versus “truth”)

# Example Outcome of Fixed (versus “truth”)

- FDA Approval?
- Medical Controversy?
- Different rhythm types?
- 2 more Studies?

Part 2

# PRECLINICAL / PRIOR CLINICAL EVIDENCE

P-ICECAP

NHLBI UG3HL159134, U24HL159132

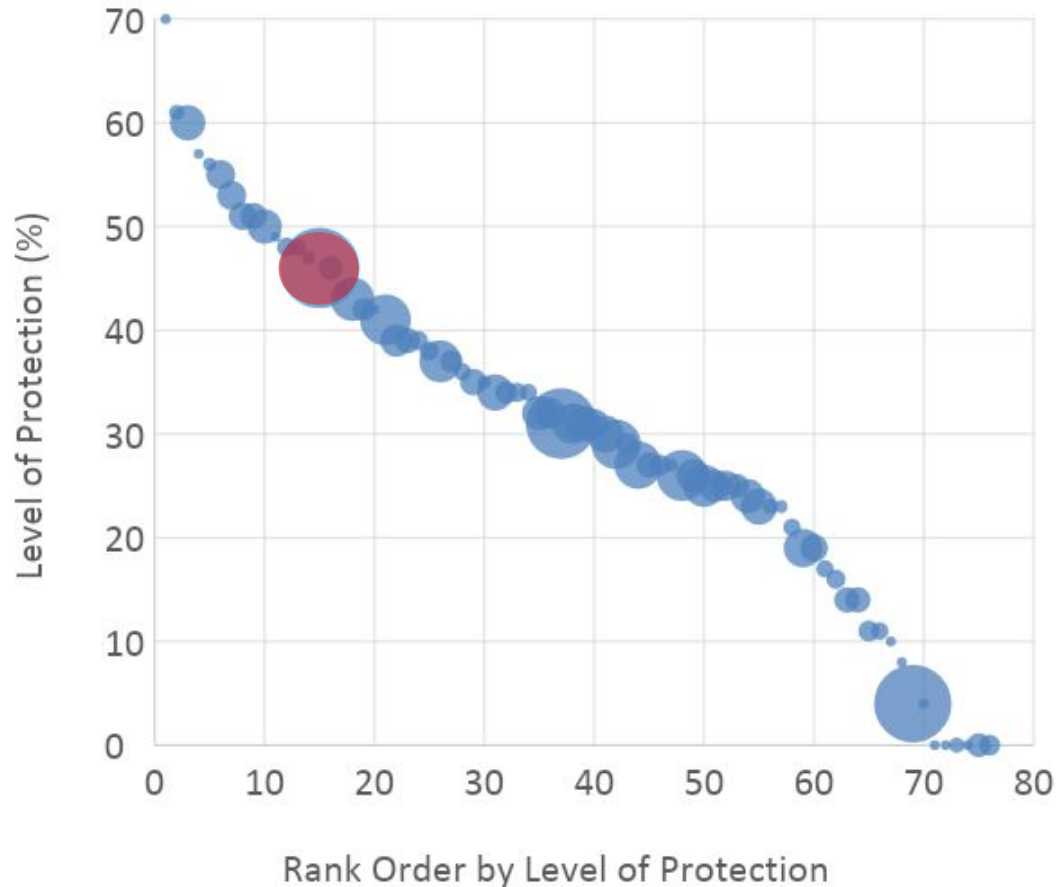

NINDS U24NS100659, U24NS100655

SIREN

## 1,026 Experimental treatments in acute stroke

	Experimental Contrasts (n)	
Focal Ischemia Models	94	favors treatment
	28	neutral
	0	favors control
Global Ischemia Models	77	favors treatment
	28	neutral
	0	favors control
Culture Models	13	favors treatment
	3	neutral
	1	favors control

% subjects with favorable neurological outcome

# The brain is sensitive to temperature

Drugs = HYPERTHERMIA

# History / Timeline

- 2003 THAPCA pre trial cohort study R21
- 2006 THAPCA R34
- 2009 THAPCA OH and THAPCA IH Trials U01
- 2011 ADAPT-IT - ICECAP planning
- 2013 THAPCA Last Outcomes Collected
- 2015 THAPCA OH - Publication
- 2016 ADULT ICECAP IDE
- 2020 ADULT ICECAP First Patient In
- 2021 P-ICECAP IDE (initial)
- 2021 P-ICECAP Award
- 2022 (Now)

# THAPCA-OH - Design

- Prospective RCT
- Out of hospital cardiac arrest
- GCS motor 4 OR less
- 48 hours of TTM to 33°C versus enforced 36.8 °C / 120 hours of TTM total in both
- Primary outcome: Survival with a good neurobehavioral outcome at 12 months of follow-up

# THAPCA-OH

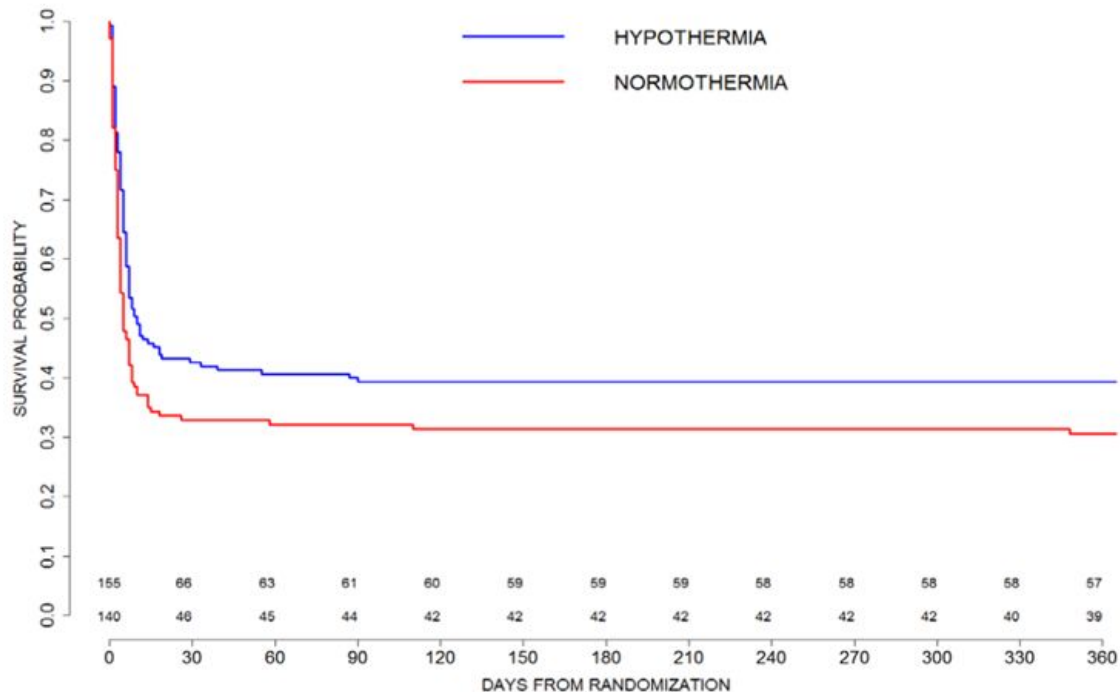

**Table 2. Primary and Secondary Outcomes.\***

Outcome	Hypothermia Group no./total no. (%)	Normothermia Group no./total no. (%)	Risk Difference percentage points (95% CI)	Relative Likelihood (95% CI)	P Value
<b>Primary outcome</b>					
Alive with VABS-II score $\geq 70$ at 1 yr	27/138 (20%)	15/122 (12%)	7.3 (-1.5 to 16.1)	1.54 (0.86 to 2.76)	0.14†
Detailed supportive analysis	20%	12%			0.14‡
Death	87/138 (63)	88/122 (72)			
<b>Disability</b>					
Profound§	16/138 (12)	11/122 (9)			
Moderate-to-severe¶	8/138 (6)	8/122 (7)			
Good functional status	27/138 (20)	15/122 (12)			

Moler FW, Silverstein FS, Holubkov R, et al. Therapeutic Hypothermia After Out-of-Hospital Cardiac Arrest in Children. *N Engl J Med* 2015;372:1898-809.

Figure S1 from THAPCA-OH: Probability of survival to one year following cardiac arrest, according to assigned treatment

The two lines represent Kaplan-Meier survival rates from 0 to 365 days after cardiac arrest for patients in each study arm ( $p=0.04$  for a log-rank test, stratified by age category, comparing survival distributions between treatment arms).

Part 3

# P-ICECAP OVERVIEW

P-ICECAP

NHLBI UG3HL159134, U24HL159132

NINDS U24NS100659, U24NS100655

# Specific Aim 1: Can the efficacy of hypothermia be confirmed by evaluating duration response?

- To determine in pediatric comatose survivors of OHCA, whether the duration response curve as assessed by the VABS-3\* mortality composite score is initially increasing, thus demonstrating efficacy of hypothermia versus normothermia (i.e. zero duration of cooling). Secondary endpoints include the Pediatric Cerebral Performance Category Score, Pediatric Resuscitation after Cardiac Arrest score, and survival at 12 months.

\*Vineland Adaptive Behavioral Scale 3 - a standardized measure of neurobehavioral functioning

# Specific Aim 2: Can the optimal duration of cooling be identified?

- To determine in pediatric comatose survivors of OHCA, the shortest duration of cooling that provides the maximum treatment effect as determined by a higher VABS-3 Mortality Composite Score.

# Specific Aim 3: Does duration have a differential effect on safety and quality of life?

- To characterize the effect of duration of hypothermia on overall safety and adverse events, and parent reported quality of life.

# P-ICECAP Comparison to Adult ICECAP

Aspect	P-ICECAP	Adult ICECAP
Durations (hours)	0-96 (10)	6-72 (10)
Eligibility Timing	Within 6 hours of ROSC - must start device before randomization must set device to 33°C within 15 minutes	Must be below 34°C within 4 hours of arrest
Sample Size	900	1800 (with different models / randomization vectors for shockable versus non-shockable)
Outcome Timing	3 and 12 months	1 and 3 months
Sites	40 (with more needing FDA approval)	Up to 75

# P-ICECAP Comparison to THAPCA

Aspect	P-ICECAP	THAPCA
Duration of cooling (hours)	0 to 96 (10 durations) at 33°C	48 at 33°C or 36.8°C
Eligibility GCS Motor	5 or lower (more inclusive)	4 or lower (less inclusive)
Sample Size	900	295 randomized (260 eligible for primary outcome)
Outcome Timing	3 and 12 months	3 and 12 months
Outcome	VAB3 mortality composite (continuous)	VABS2 $\geq$ 70 and alive = good (binary)

# Inclusion

- Age 2 days to <18 years with corrected gestational age of at least 38 weeks
- coma or encephalopathy after return of spontaneous circulation (ROSC) following out-of-hospital cardiac arrest;
- requiring mechanical ventilation;
- **definitive temperature control device started;**
- informed consent from legally authorized representative (LAR)  
**including randomization within 6 hours of ROSC;**
- intent to maintain life support for 120 hours

# Exclusion (Major)

- **Glasgow Coma Motor Score (GCMS) of 6,**
- **severe hemodynamic instability;**
- pre-existing condition confounding outcome determination
- pre-existing terminal illness;
- planned early withdrawal of life support before 120 hours;
- pre-existing contraindication to cooling\*;
- **CPR duration > 60 minutes;**
- Prisoner;
- **KNOWN pregnancy**

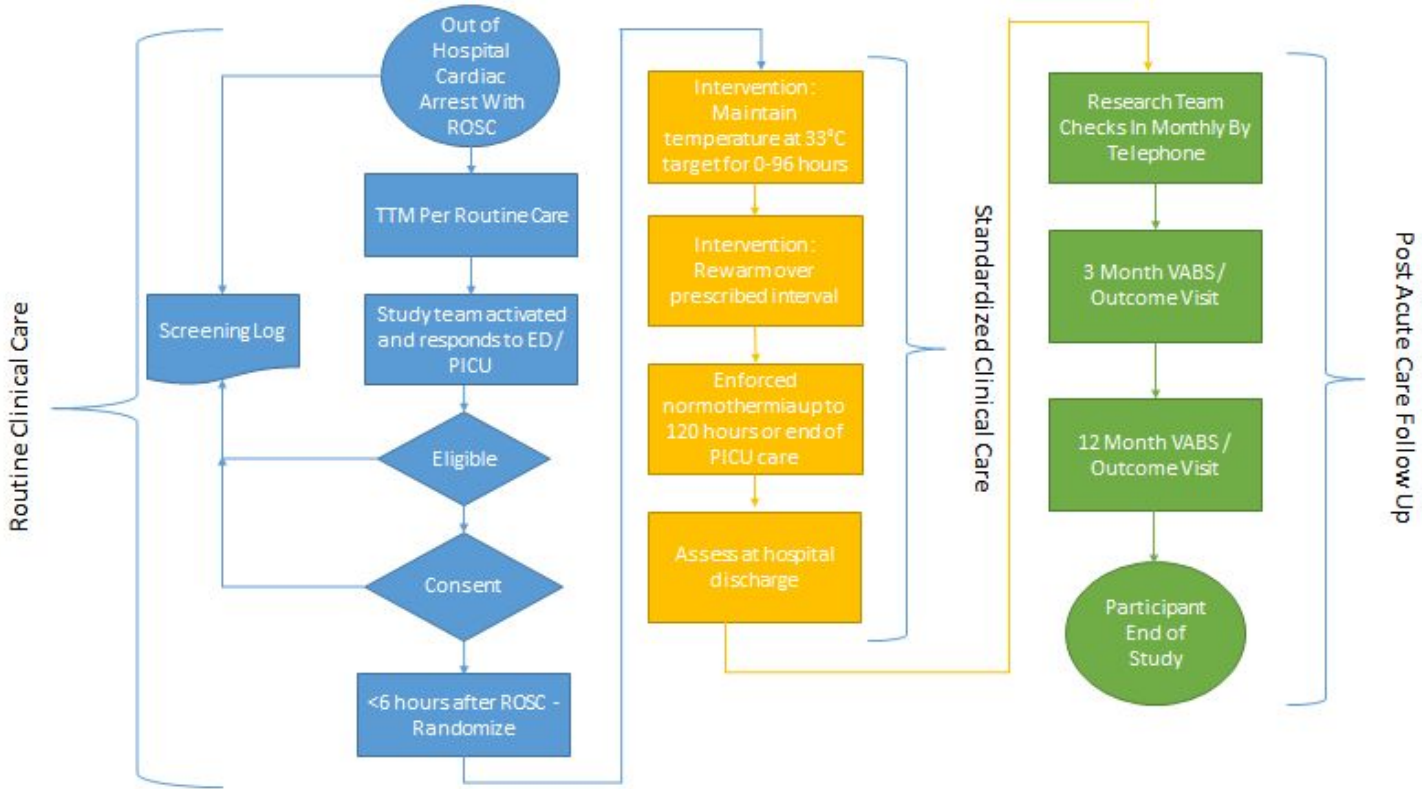

# Intervention

- Duration 0-96 hours
- Measured from definitive cooling initiation and being set to 33° C (or normothermia if assigned to no additional cooling)
- Any definitive surface, servo controlled cooling device\*
- Clinical standardization

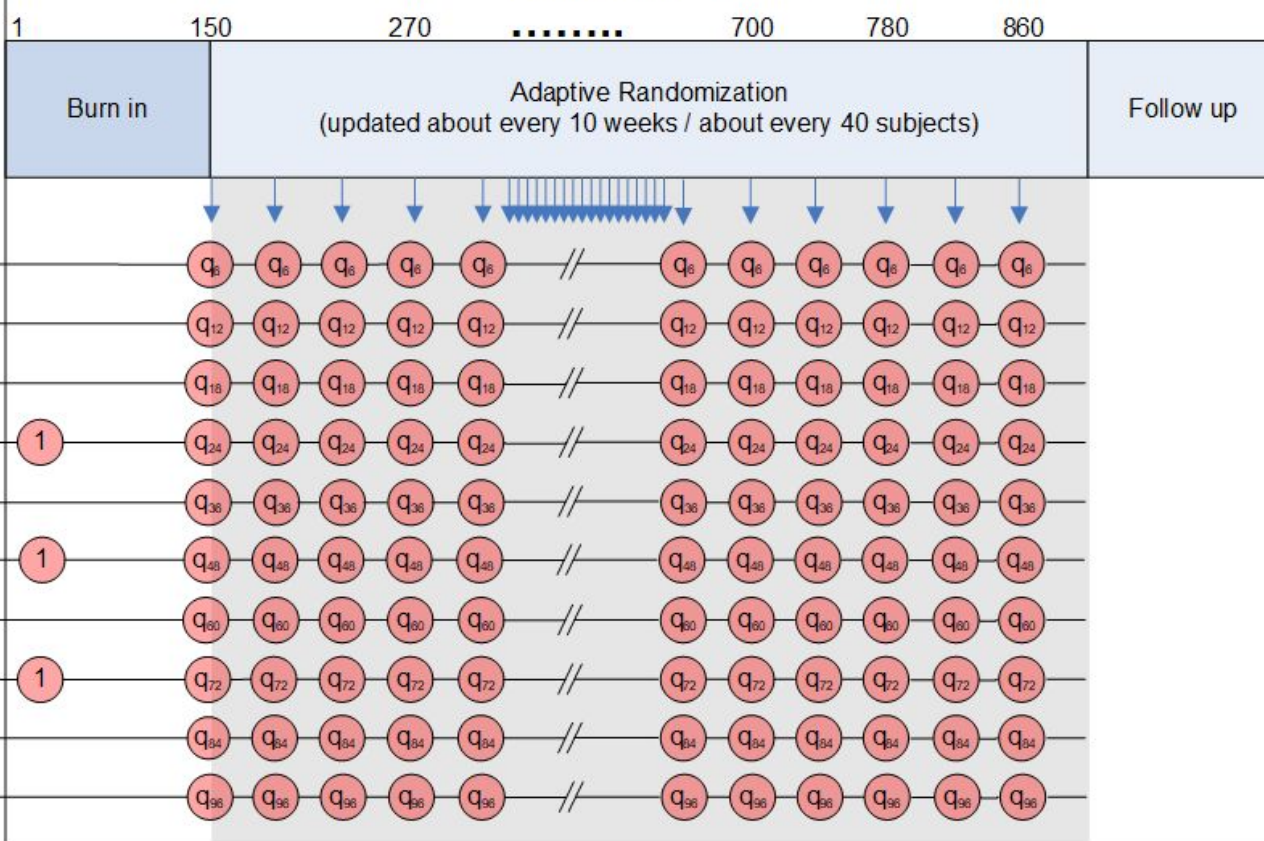

# Enrollment and Patient Flow

# Enrollment and Follow-up

Subject #

# Why be adaptive

- To get closer to the “truth”
- To put kids where they will do best
- To avoid cooling kids too much (or too little)
- First 150 kids - equal allocation 24,48,72 (reduce noise)

# Primary Outcome: VABS-3 - Mortality Composite Score

- Vineland Adaptive Behavior Scale - Third Edition
- Standardized caregiver report measure of neurobehavioral function appropriate from birth through adulthood

# Primary Outcome: VABS-3 Mortality Composite Score

- Measured VABS-3 composite scores range from 20-140 (mean=100, SD=15).
- Patients who die before 12 month outcome assessment will be assigned zero
- Used continuously to simultaneously account for mortality and neurological status

# Other Outcomes

- PCPC (Pediatric Cerebral Performance Category)
- PedsQL (Pediatric Quality of Life Inventory TM)
- Family Burden
- Structured Neuro Exam
- Mortality at 12 months

# Safety Outcomes

(anticipated)

- **Infection** (pneumonia, UTI, BSI, culture positive bacterial sepsis and other culture positive infections)
- **Life-threatening cardiac arrhythmias** requiring intervention (cardiac arrest, ventricular fibrillation, ventricular tachycardia, atrial arrhythmias with hemodynamic compromise)
- **Coagulopathy** Increased bleeding requiring blood product replacement
- **Neurological worsening** (i.e. cerebral edema and herniation, intractable status epilepticus, cerebral hemorrhage, cerebral infarction)
